

What is eProofs?

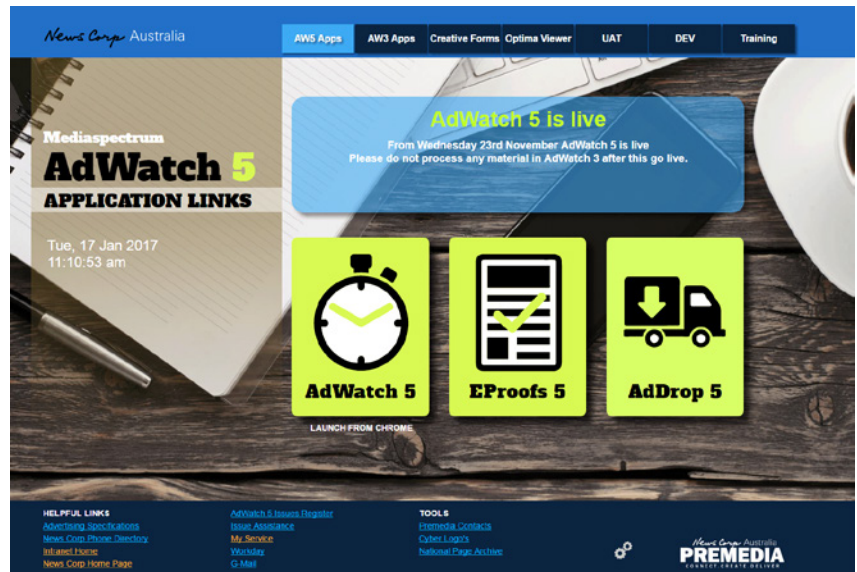

eProofs is an online advertising server in which users can manage bookings, material and the proofing process.

How is eProofs used?

eProofs can be used to check the progress and status of material. Users can upload components, comments, upload complete material and look up previous insertions all through eProofs.

All comments can be submitted electronically.

Both Sales Teams and users can retrieve proofs and tear sheets.

What can I see in eProofs?

You will be able to view information for all insertions made by you and the other Sales Teams in your division including the ads where material is to be submitted by Quickcut or Websend.

In addition to being able to view some booking details, you can view images of proofs as well as material which has been submitted via Quickcut and Websend, when the Artwork is received and matched against the respective Ad Number.
